

Highlights

This issue of the *Natural Gas Monthly* contains estimates of natural gas data through July 2001 for many data series at the national level. National-level natural gas prices are available through March 2001 (electric utilities), April (residential, commercial, and industrial), and June (wellhead). State-level data generally are available through April 2001, although underground storage data are available through May 2001.

Recent analyses of the natural gas industry are available on the EIA web site, under "Featured Topics" to the right side of the home page. The first two reports listed below are updated regularly, while the third is a one-time report that was released in May 2001. These reports are:

- *Natural Gas Weekly Update* - a current analysis of the industry each week, including information on natural gas spot and futures prices and storage activities.

This page also provides links to numerous other EIA sites dealing with natural gas.

- *Short Term Energy Outlook* - projections of energy consumption, supply, and price by type of fuel, including natural gas, for the next 18 months.
- *U.S. Natural Gas Markets: Recent Trends and Prospects for the Future* - an assessment of current market issues, such as the relatively low levels of natural gas in storage and high natural gas prices, and their implications for the future.

Other natural gas data and analyses may be found through the "Natural Gas" section of EIA's web site. In the center section of the home page, the user should place the cursor on "By Fuel," then click on "Natural Gas" in the drop-down menu.
